

LAN ONE.

TOTAL Business Technology Solutions

About Lan One

Lan One is a Memphis, Tennessee based technology services firm specializing in the installation and support of internal telecommunications and data networks.

With extensive experience in real-world production environments, Lan One can help you develop a technology plan that will position your organization for success. We will find solutions that have been tested and proven in real business environments. We have the experience and the track record to make your business as productive as you always knew that it could be.

Lan One offers the following services:

- IT Outsourcing
- Systems Integration
- Audio, Video, Computer, and Telephone cabling
- Internal and external wireless technology
- Surveillance/web camera technology
- Telecommunications Systems, including the latest in IP telephony
- Proactive Managed Network Services
- Managed Security Updates Management System for desktop computers
- Managed Network Intrusion Detection System
- Network Security Assessment Service (Basic or Advanced)
- Firewall and Router Remote Management Service
- A 24/7 customer support center using an advanced customer management system

Our Vision

Lan One has developed specific initiatives to assemble many different pieces of the information technology (IT) puzzle into a seamless integrated solution.

Traditionally, computer services and telephone services have been handled by different parties using separate systems. Technology is bringing these systems together, significantly reducing equipment costs, and enriching the functionality and effectiveness of data and telecommunications systems.

"Our Mission is to help customers leverage technology to improve business processes through a corporate culture of integrity, trust, and respect."
